I oppose the limitations that are trying to be placed on traffic and weather reports on satellite radio. As a carhauler, I need traffic info etc all day not just during the am and pm rush hours and I don't like having to constantly search for local stations with satellite radio I can get the info I need when I need it with convenience. Putting limitations on satellite radios ability to provide services that we subscribe to doesn't seem fair. I appose HR4026.
